

PRESS RELEASE REMOVABLE COAL DOOR FEATURE NOW STANDARD WITH MAC TRAILER

MAC Trailer has designed an easily replaced coal door chute panel to reduce maintenance costs that is now standard on all MAC end dump trailers. The new door layout was driven by the need to have a design that will allow the operator to easily replace a damaged panel by way of a minor process. The protective cover, opening frame-work, and hardware are all bolt in place components. The channel within which the door panel travels is an aluminum extrusion in order to maintain its dimension and houses a plastic bearing strip to reduce friction and ensure ease of operation.

For further information on the MAC Trailer all new removable coal door feature, contact a MAC Regional Sales Manager or an Authorized MAC Dealer nearest you. MAC Trailer: www.MACtrailer.com 1-800-795-8454
